

Anki Card Generator

Instructions:

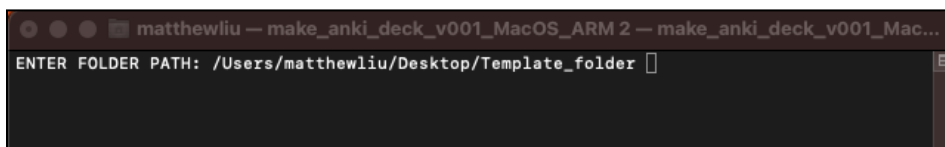

1. In a folder, prepare an Excel file and your lecture PDF.

2. Format your Excel so that the 1st column is the questions, the 2nd column is the answers, and the 3rd column is the slide number on the corresponding lecture PDF. (Headers can optionally be included in the 1st row.)

	A	B	C	D
1	What is the first page of this presentation?	This!	1	
2	What is the 5th page of this presentation?	This!	5	
3	What is the 10th page of this presentation?	This!	10	
4				
5				
6				
7				
8				

3. Open the executable (might need to set up permissions correctly the first time).
 - a. Note: It might take some seconds for the program to boot up.
4. Enter the path to the folder as prompted. (You should be able to drag and drop.)

There should be a note upon successful completion:

```
matthewliu — make_anki_deck_v001_MacOS_ARM 2 — make_anki_deck_v001_Mac...
ENTER FOLDER PATH: /Users/matthewliu/Desktop/Template_folder
SUCCESSFULLY MADE DECK FOR /Users/matthewliu/Desktop/Template_folder!
ENTER FOLDER PATH: 
```

5. Open the Anki deck (by default, this is saved in your folder). If everything worked, you should see the questions, answers, and corresponding lecture slides on your cards.
